

## **Expand Sickle Cell Disease Efforts at CDC**

**REQUEST: Provide new, dedicated funding for the Sickle Cell Disease (SCD) Data Collection program at the Centers for Disease Control and Prevention's (CDC) Blood Disorders Division, within the National Center on Birth Defects and Developmental Disabilities.**

### ***Sickle Cell Disease (SCD) and Sickle Cell Trait (SCT)***

Sickle Cell Disease (SCD) is an inherited, lifelong disorder affecting nearly 100,000 Americans. Individuals with the disease produce abnormal hemoglobin which results in their red blood cells becoming rigid and sickle-shaped and causing them to get stuck in blood vessels and block blood and oxygen flow to the body. SCD complications include severe pain, stroke, acute chest syndrome (a condition that lowers the level of oxygen in the blood), organ damage, and in some cases premature death. Though new approaches to managing SCD have led to improvements in diagnosis and supportive care, many people living with the disease are unable to access quality care and are limited by a lack of effective treatment options.

Sickle cell trait (SCT) is **not** a disease. Having SCT simply means that a person carries a single gene for sickle cell disease (SCD) and can pass this gene along to their children. People with SCT usually do not have any of the symptoms of SCD and live a normal life.

### ***CDC Current Activities***

With funding from the CDC Foundation, CDC has established a population-based surveillance system to collect and analyze longitudinal data about people living in the U.S. with SCD. Due to limited funding, implementation of the program has occurred only in two states – California and Georgia (approximately 10% of the US SCD population). Data is being collected from multiple sources (newborn screening programs and Medicaid) in order to create individual healthcare utilization profiles.

### ***Expanding CDC's SCD Surveillance and Outreach and Education Programs***

Strengthening and expanding current efforts will help enable individuals living with this disease to receive adequate care and treatment. A provision in the *Sickle Cell Disease and Other Heritable Blood Disorders Research, Surveillance, Prevention, and Treatment Act of 2018* (P.L. 115—327), which was signed into law in December 2018, authorizes CDC to award SCD data collection grants to states, academic institutions, and non-profit organizations to gather information on the prevalence of SCD and the health outcomes, complications, and treatment that people with SCD experience.

Dedicated federal funding for CDC's SCD Data Collection Program is necessary to allow the program to be expanded to include additional states with the goal of covering the majority of the U.S. SCD population over the next 5 years. Surveillance is necessary to:

- Improve understanding of the health outcomes and health care system utilization patterns of people with SCD
- Increase evidence for public health programs and to establish cost-effective practices to improve and extend the lives of people with SCD

\*\*\*\*\*

The American Society of Hematology (ASH) represents more than 17,000 physicians, researcher, and medical trainees committed to the study and treatment of blood and blood-related diseases. ASH members include clinicians who specialize in treating children and adults with SCD and researchers who investigate the causes and potential treatments of SCD manifestations. ASH is committed to addressing the burden of SCD and recently released a *Call to Action on SCD* along with other stakeholders, founded the Sickle Cell Disease Coalition, and a public relations campaign. ASH's *State of SCD 2016 Report* and Report Card identified outlines the most pressing areas of need and provides a blueprint to advance these actions related to access to care, research and clinical trials, and global issues in sickle cell disease (SCD). For more information about the report, the report card and the new Sickle Cell Disease Coalition visit [www.scdcoalition.org](http://www.scdcoalition.org) and for more information on SCD visit ASH's website ([www.hematology.org/SCD](http://www.hematology.org/SCD)).
